Draft Reserve Action Plan Blue Gum Park

2023

Blue Gum Reserve Actions

Priorities will be given to programs for the long term benefit to the reserve. Natural assets at greatest risk will be given priority to avert irreversible deterioration. All measures cannot be implemented simultaneously - resources may not be available or it may not be appropriate.

- 1. Contractors to investigate and minimise floating gross pollutants at stormwater outlets, along Blue Gum Creek and its tributaries.
- 2. Bushland Contractors (BC) to maintain previously weeded areas and reduce weed infestations. Clear islands within Privet to create nodes of good bush. Target woody weeds within Coachwood forest along creekline.
- 3. Blue Gum Bushcare group, with support from Council, to continue work in accordance with Bushcare Action Plan.
- 4. BC to continue maintenance of area previously worked by Bushcare group.
- 5. Continue to monitor and manage the extent of non-indigenous Flooded Gum (Eucalyptus grandis) beside Greville St Oval with an aim to limit its distribution.
- 6. Mowing Contractor to maintain lawn areas and edges.
- 7. Willoughby City Council (WCC) to continue maintenance behind properties 152-158 Greville St to ensure asset protection zones (APZs) are established and maintained.
- 8. Sediment basin to be monitored and periodically emptied.
- 9. WCC Bushland Team to conduct secondary weeding in area previously worked by contractors, using poppers. Team to also target Cat's Claw Creeper. Works are to head upstream towards Dulwich Road.
- 10. BC to continue maintenance weeding of area from Scout Hall to access road and next to 13 Kooba Ave.
- 11. Monitor stormwater lines and flow paths to reduce erosion.
- 12. BC to continue assisted regeneration behind Kareela Rd properties.

- BC to continue maintenance and primary weeding from creek and walking track towards lawn ar West Pde.
- 14. Investigate the construction of a drainage channel with rock armouring at northern end of West
- 15. BC to maintain area from creek line up to West Parade cul-de-sac.
- BC to contain Fishbone Fern using physical barriers and focus hand weeding efforts above the or and Dulwich Road end of reserve.
- 17. BC to continue maintenance weeding.
- Consult with National Parks and Wildlife Services (NPWS) regarding signage at the boundary with National Park (NP) to identify change in jurisdiction and restrictions that apply such as dog excluwithin Lane Cove NP.
- BC to assist NPWS with maintenance of previously worked areas beside Millwood Ave and lowe Gum Creek.
- 20. Tracks to be monitored and maintained by WCC Bushland teams.
- 21. Creek lines to be monitored for erosion. Banks to be stabilised where appropriate.
- 22. Monitor all sewer access chambers for overflows.
- 23. WCC to liaise with Scouts re ongoing management of creek bank vegetation near Scout Hall.
- 24. WCC Bush Regeneration Team and contractor staff to consult with wildlife and habitat officers o of arboreal, terrestrial and other features to improve wildlife habitat. This includes the repurposin hollows for nest boxes.
- 25. WCC Bush Regeneration Team and contractor staff to consult with wildlife and habitat officers o plans to improve habitat connectivity with adjoining areas.
- 26. Natural Assets Officer to liaise with DPE's Senior Threatened Species Officer in conducting monitorin surveys for threatened fungi, in accordance with the State Government's Save Our Species Program.

Blue Gum Reserve Action Plan

Reserve Profile

Blue Gum Reserve is 17ha of bushland located west of the Pacific Highway and north of Fullers Road in Chatswood. It is important as a contiguous link with Fullers Reserve, bushland managed by Ku-ring-gai Council and the Lane Cove National Reserve, managed by the NSW National Reserves & Wildlife Service to the west.

PLANT COMMUNITY: Blue Gum Reserve supports a small pocket of Blue Gum High Forest (S_WSF01) in the eastern section near Dulwich Rd. It is a tall wet sclerophyll forest community found on fertile shale soil. It consists of Sydney Blue Gum (Eucalyptus saligna), Blackbutt (Eucalyptus pilularis) and Turpentine (Syncarpia glomulifera). Remnant Blue Gum High Forest is listed as a Critically Endangered Ecological Community under the NSW Biodiversity Conservation Act 2016. Currently there is only 4% of its original extent left in NSW. Blue Gum Creek runs through the Reserve and is surrounded by Coastal Sandstone Gallery Rainforest (S_RF02). Coachwood (Ceratopetalum apetalum) dominates the canopy with Black Wattle (Callicoma serratifolia), Lilly Pilly (Acmena smithii), Water Gum (Tristaniopsis laurina) and tree ferns (Cyathea spp.) forming the sub-canopy layer. Beyond the creek, Coastal Enriched Sandstone Moist Forest (S_WSF02) is found in western parts of the Reserve. It is tall open eucalypt forest with a mesic shrub and small tree layer. The canopy consists of Smooth-barked Apple (Angophora costata), Turpentine (Syncarpia glomulifera), Blackbutt (Eucalyptus *pilularis*) and Sydney peppermint (*Eucalyptus piperita*). Lower are rainforest species such as Coachwood (Ceratopetalum apetalum), Blueberry Ash (Elaeocarpus reticulatus) and Cabbage Tree Palms (Livistona australis). The forest floor is covered by ferns and twiners. West of the scout hall the dominant vegetation community is Coastal Enriched Sandstone Dry Forest (S_DSF04). It is a tall open eucalypt forest with an understorey of dry sclerophyll shrubs and ferns amongst the ground cover. The canopy consists of smooth-barked apple (Angophora costata), Sydney peppermint (Eucalyptus piperita) and blackbutt (Eucalyptus pilularis). Small trees Allocasuarina littoralis and Old Man Banksia (Banksia serrata) are common above a variety of wattles, tea-trees, gee bungs and grass trees. In the far southwest section of the Reserve there is a small community of Sydney North Exposed Sandstone Woodland (S_DSF11) in a lower eucalypt woodland community.

Statement of Significance

Blue Gum Reserve is classified as bushland in State Environmental Planning Policy No 19 (*Vol 1, 1.4), and is protected under State and Commonwealth Legislation (*Vol 1, 1.5.2). The majority of the Reserve is zoned E2 Environmental Conservation in the Willoughby Local Environment Plan (WLEP) 2012.

It is an important recreational space with open areas and walking tracks through bushland that links Roseville and Chatswood with the Lane Cove National Reserve.

ABORIGINAL CULTURAL SIGNIFICANCE: There are no recorded sites in the Reserve, however there are many nearby along the Lane Cove River. The Gamaragal people are the traditional inhabitants. NATURAL HERITAGE SIGNIFICANCE: Blue Gum Reserve is significant for its diversity of native plant and wildlife species. Predominantly open woodland above the gully forest along the creek, the Reserve has a range of hollow bearing and stag trees, rock outcrops and bush rock structures. There is a large area of dense weeds consisting mostly of Privet, Lantana, Ochna and Fishbone Fern in the western area of the Reserve that provides habitat, particularly for small birds. These weeds will incrementally be removed to allow wildlife populations to find habitat in adjacent areas.Blue Gum Creek runs through the Reserve. The Reserve is steep in sections with significant rock outcrops providing habitat.

The Reserve is important for its east/west and north/south habitat links, particularly for long ranging wildlife, such as birds and bats. Diversity of vegetation communities and geological niches provide habitat for a variety of wildlife including insects, lizards, frogs, Microbats, Grey-headed Flying Fox, Sugar Glider, Brown Antechinus, Long-nosed Bandicoot and many species of birds. It is home to both migratory and local birds, including the Powerful Owl which has a conservation status of vulnerable in New South Wales.

The Reserve also provides habitat for a variety of fungi. Fungi play a fundamental role in the environment, including symbiotic mutualisms in nutrient cycling, retention, and formation of soil structure. There are several species of Hygrocybe (H.) in the reserve that are threatened including H. reesiae, H. aurantipes, H. austropratensis and H. anomela var. ianthinomarginata.

HISTORIC CULTURAL SIGNIFICANCE: The one hundred acres of land between the Lane Cove River and Blue Gum Creek, granted to Robert Ball in 1836 would have included the Reserve. Early use was for timber-getting, later orchards and market gardens were established between the river and Fullers Rd. Three small dairies were located at West Pde, Kareela Rd and Greville St prior to 1953. Remains of the former Chatswood Rifle Range include a target wall built on an embankment and firing mounds with masonry walls. These areas are within the Lane Cove National Reserve. When operational, the rifle range was kept cleared, but when use ceased in 1955 weeds established.

There are remnants of an old vehicle access trail hidden under vegetation west of Greville St that may have been established when orchards and dairies were present.

Reserve Impacts

Stormwater channeled into drainage lines and the Creek has had a significant impact. During rain events increased water erodes creek banks and carries gross pollutants, sediment and nutrients. Along with the occasional overflow from the sewerage system these impacts encourage the spread of weeds and deterioration of native flora and fauna.

Past land clearing, farming practices and urbanisation has led to degraded soil profiles and changed drainage patterns. Walking tracks segment bushland and provide easy access for feral and domestic animals.

Residential properties are adjacent to the entire southern, eastern and almost half of the northern boundary. Potential impacts are dumping of garden waste, encroaching into the Reserve, excess runoff of water and/or nutrients and pets entering the Reserve. The Lane Cove National Reserve adjoins to the west. There are extreme weed infestations in the National Reserve that if left could impact native plant vegetation in Blue Gum Reserve.

ENCROACHMENTS: Encroachments are recorded at Findlay Avenue, Greville Street, Kareela Road, Dulwich Road. All encroachments will be requested to be removed based on priority. New encroachments will be forwarded to Council compliance.

Wildlife Habitat Issues

Blue Gum Reserve's continuity with other natural areas makes it an important haven for wildlife. Areas dominated by woody weeds have value as habitat, especially for small birds. Changes occurring to vegetation during regeneration could potentially favour certain species at a cost to others without the deliberate creation and management of declining habitat types.

There are issues arising from uncontrolled dogs and cats. The Reserve is designated as a Wildlife Protection Area under the Companion Animals Act 1998. Dogs are allowed leashed in the Reserve east of Kooba Ave and no dogs are permitted to the west. Cats are not allowed in the reserve at all.

There is also evidence of fox activity in the reserve.

Achievements

An informal track was upgraded in 2019 from the Scout Hall to the bush track below Greville Street, to provide continuity of access. Fox baiting has continued to help protect native wildlife.

Bushland Management Goals – Blue Gum Reserve

The following management aims from the UBPOM 2023 are priory objectives in this reserve:

5.3c: To reduce sediment loads in stormwater and creek lines throughout catchments:

5.4b: To maintain the integrity of bushland reserves through the reduction of encroachments and other boundary impacts;

5.6c: To protect bushland viability through the control of activities which may cause permanent disturbance or change to bushland; 6.3b: To implement weed control programs which are based on regeneration and restoration principles and which increase the bushland resilience to further weed infestation.

Bushland Management – General Principles for all Reserves

- a. Bushland regeneration is a long term process requiring staged weed removal to ensure establishment of native plant communities. Work will proceed from good bush to degraded areas with techniques that encourage regeneration.
- b. If possible, weed refuse and natural debris composted on site.
- c. If natural regeneration is deemed inadequate, supplementary plantings to mimic local plant communities and landscapes will be used with local provenance species.
- d. Standing dead trees and forest litter (including logs/branches) to be kept for wildlife habitat unless deemed a risk to safety.
- e. Monitor, maintain and enhance vegetation connectivity for wildlife habitat within the reserve and reserve networks.
- Phytophthora cinnamomi (a root rot pathogen) is listed as a key threatening process in NSW. Bushland workers are to use hygiene protocols to minimise risk.
- g. Report and record all reserve encroachments. Monitor for tree vandalism and/or removal and report to Council Compliance for appropriate action.
- h. Monitor wildlife habitat and supplement where necessary.
- Monitor feral animal activity and implement appropriate management actions where necessary.
- Encourage the community to report wildlife sightings via the Wildlife Watch Program.
- k. Bushfire management will be achieved through implementation of a strategic hazard reduction program consistent with the Bushfire Risk Management Plan.
- I. Species diversity will be maintained by an ecological burn program in a mosaic pattern.
- m. Monitor and protect Aboriginal cultural heritage sites. Bushland staff to notify Aboriginal Heritage Office prior to a burn to identify sites and implement protection measures.
- n. Preserve natural features for educational purposes and continue to inform the community of bushland issues through on-site activities and signage. Maintain appropriate signage.
- o. Formal tracks to be maintained and unwanted tracks to be closed to prevent damage to habitat and to impede access of feral animals, unless used for access by bushland workers.
- p. Establish photo points to monitor work and review annually

Animal List for Blue Gum Reserve

Blue Gum Reserve provides habitat for a number native animals. A list of these species can be found at: https://www.willoughby.nsw.gov.au/Residents/Reserves-andrecreation/Reserves-reserves-and-playgrounds/Blue-Gum-Reserve

Native Plant List for Blue Gum Reserve

FORK FERNS	CELASTRACEAE	MALVACEAE	RHAMNACEAE
