1 Introduction

Willoughby City Council is committed to promoting Travel Demand Management by encouraging the use of active and public transport and minimising the adverse effects of car use in a way that sustains and enhances the economic and environmental qualities of the local government area.

Increasing the supply of car parking tends to encourage a greater number of vehicle trips. This increases congestion and impacts negatively on the city environment. We carefully consider when off-street car parking is allocated for developments and the amount of car parking allocated.

This part of Willoughby Development Control Plan (Willoughby DCP) outlines the transport requirements for off-street car parking, bicycle parking and end-of-trip facilities, loading/unloading facilities, and provisions for alternative transport modes.

1.1 Aim

The aim of this part is to reduce and manage the demand for car use and associated parking. This part also encourages the use of other alternative modes of transport.

1.2 Objectives

The objectives of this part are to:

- a. ensure developments make adequate provision for a reasonable number of off-street car parking spaces, including accessible (disabled) parking spaces
- b. ensure developments make adequate provision for parking and end-of-trip facilities for bicycles
- c. ensure developments make adequate provision for electric and autonomous vehicles, car share spaces, and other alternative modes of transport
- d. provide controls for the safe, convenient, and efficient movement of pedestrians, bicycles and vehicles for developments
- e. ensure the access and design of car parking areas contribute positively to the public domain
- f. reduce the demand for private car use and off-street car parking by employing the principles of travel demand management.

2 Strategies/studies

2.1 Willoughby Integrated Transport Strategy 2036

Willoughby Integrated Transport Strategy 2036 is Willoughby City Council's overarching framework for transport planning and initiatives to 2036. This part of Willoughby DCP aligns with the principles and intent of this important strategy for the local government area. The strategy is at willoughby.nsw.gov.au.

2.2 Review of Parking Rates

Consultants Cardno (now Stantec) carried out studies and provided two reports that reviewed the DCP parking rates, including bicycle parking and end-of-trip facilities.

The work stated that parking policies must reflect the need for parking across different types and uses. It also recognised that an oversupply of parking is just as undesirable as an undersupply.

The report recommended that parking rates may be reduced by employing the principles of travel demand management (TDM). This would generally need to be supported by a travel demand management plan (see Section 6 of this part).

The first report was supported by a Technical Memorandum dated 20 October 2022 which was entitled *Review of Parking Rates Addendum: Regional Shopping Centre Parking Rates*. This memorandum provided recommended minimum and maximum parking rates for regional shopping centres (premises greater than 30,000m²), located in Chatswood and St Leonards. These rates were considered by Council and supported.

A second report investigated the inclusion of minimum parking rates for land uses in the Chatswood, St Leonards and the Artarmon railway precinct. This provide a 'banded rate' with a maximum and minimum rate for these railway precincts which Council has supported. The study also investigated the parking rates in local centres such as Castlecrag.

3 Parking provisions in the railway precincts of Chatswood, St Leonards and Artarmon.

The report recommended the following controls in the railway precincts: (See **Table 1** for details of a range of development types)

- Between 0.1 and 0.25 spaces for residential development in the Chatswood/St Leonards CBDs and between 0.1 and 0.5 in the Artarmon railways precincts (depending on the number of bedrooms).
- The minimum car parking rate for primary/destination developments (e.g. office/business, supermarkets and bulky good retail premises) be approximately 2/3 of their maximum rate.
- The minimum car parking rate for regional shopping centres (greater than 30,000m² in Chatswood and St Leonards) be just over 1/2 of their maximum rate.
- The minimum car parking rate for certain supporting/ancillary developments (e.g. small retail and food and drink premises) be approximately 1/3 of their maximum rate.
- The minimum car parking rate for certain unique uses (e.g. hospitals, medical centres, childcare centres) be between 1/3 and 1/2 of their maximum rate.
- A development application is required if a proposal does not satisfy all the criteria for either exempt or complying development under the Codes SEPP.

These rates were also considered by Council and supported.

3.1 Parking provisions outside of the railway precincts of Chatswood, St Leonards and Artarmon

The demand for car parking will vary from one development to another and in different locations. The parking rates outside of the railway precincts are 'target' rates. These rates are neither maximum nor minimum. However, any proposal to vary the number of spaces must be justified and consider the location and parking demand generated by the development.

A reduction of the target rate for developments along and within 200m of a major public transport route may be considered if the development is close to a regular bus service.

Major public transport routes are:

- Pacific Highway south of Albert Avenue
- Victoria Avenue west of Penshurst Street
- Willoughby Road
- Strathallen Avenue
- Penshurst Street south of Victoria Avenue
- Sailors Bay Road (for land zoned E1 Local Centre)
- Eastern Valley Way
- Smith Street
- High Street
- Mowbray Road:

If part of a property falls within the 500m radius of the Artarmon railway precinct or within 200m of a major public transport route, the whole of that property is considered to be within the railway precinct or major public transport route.

- See Sections 5.3 and 5.4 of this part for details on visitor and accessible car parking.
- Unless otherwise stated, if the total number of car spaces is not a whole number, the number of spaces required must be rounded down.
- Any additional car spaces that may be allowed by Willoughby City Council will be included in the calculation of the gross floor area.
- If the development is an extension/modification to an existing development, more car parking space is only required if increasing the floor area creates further parking demand.

This second report also reviewed local centre parking rates, including bicycle parking and end-of-trip facilities. With respect to car parking rates for Castlecrag, the Stantec report stated that this suburb is highly dependent on private vehicle travel due in part to its geography, relatively poor walkability and access to public transport, as well as its older demographic.

The assessment found that Castlecrag is skewed towards a more aged and less accessible community with higher dependence on private vehicles, however not to an extreme extent that significantly segregates Castlecrag from other local centres such as Northbridge, Willoughby South, Willoughby High Street or Penshurst Street.

In relation to the Quadrangle site (100 Edinburgh Road) site, specific DCP controls in *Part L Section 13 Controls for Specific Sites* includes site specific car parking rates including accessible parking rates which will prevail over parking rates that apply in Part F.

The analysis determined that Council could reasonably approve an increase in the amount of car parking above the target rate in local centres including the number of disabled parking spaces, provided adequate justification is provided.

The proposed justification in local centres would need to include provision of the following:

- The assessment of likely demand for parking spaces, and
- Whether it is appropriate to allow a variation in the supply of spaces.

These are two separate considerations, outlined further below:

1. Car Parking Demand Assessment

An application to vary the number of car parking spaces required by the target car parking rates must be accompanied by a Car Parking Demand Assessment. The Car Parking Demand Assessment must address the following matters, to the satisfaction of the responsible authority:

- The likelihood of multi-purpose trips within the locality which are likely to be combined with a trip to the land in connection with the proposed use
- The variation of car parking demand likely to be generated by the proposed use over time
- The short-stay and long-stay car parking demand likely to be generated by the proposed use
- The availability of public transport in the locality of the land
- The convenience of pedestrian and cyclist access to the land
- The provision of bicycle parking and end of trip facilities for cyclists in the locality of the land
- The anticipated car ownership rates of likely or proposed visitors to or occupants (residents or employees) of the land
- Any empirical assessment or case study.

2. Appropriateness of Varying the Parking Supply

Before granting a permit to vary the number of parking spaces, Council must consider the following, as appropriate:

- The Car Parking Demand Assessment
- Any relevant local planning policy or incorporated plan
- The availability of alternative car parking in the locality of the land, including:
 - a. Public car parks intended to serve the land
 - b. On street parking in non-residential zones
 - c. Streets in residential zones specifically managed for non-residential parking.
- On street parking in residential zones in the locality of the land that is intended to be for residential use
- The practicality of providing car parking on the site, particularly for small lots
- Whether a Green Travel Plan has been provided
- Existing and likely future traffic volumes on the surrounding road network and the nature of this network
- Any adverse economic impact a shortfall of parking may have on the economic viability of any nearby activity centre
- Any credit that should be allowed for car parking spaces provided on common land or by a cash-in-lieu payment or similar

- Local traffic management in the locality of the land
- The impact of the variation of car parking spaces on local amenity, including pedestrian amenity and the amenity of nearby residential areas
- The environmental implications of providing parking with particular regard to vegetation and landscape impacts
- The character of the surrounding area and whether varying the car parking provision would result in a positive urban design outcome
- Any other relevant consideration.

The recommendations contained in the Stantec report were considered and supported by Council and are now included as DCP requirements. **Table 1** at the end of this part details car parking requirements for a range of development types.

Maps showing Chatswood CBD, the St Leonards precinct and the Artarmon railway precinct are in Attachments 1, 2 and 3.

3.2 Motorcycle parking

Adequate provision must be made for motorcycle parking for all new developments and, where practicable, for alterations, additions and change of uses. All motorcycle parking requirements are minimum rates.

As a minimum, one space for residents and one visitor space is required for residential development comprising 10 or more dwellings, and one space for employees and one visitor space is required for commercial, retail, industrial and other non-residential buildings exceeding 500m².

Notes:

- If the total number of spaces is not a whole number, the number of spaces required must be rounded down.
- Motorcycle spaces must have a minimum dimension of 1.2m x 3m.

Table 2 at the end of this part details the requirements for motorcycle spaces.

3.3 Bicycle parking and end-of-trip facilities

The social, economic, and environmental benefits of bicycle use have created a greater emphasis on promoting and prioritising bicycle parking facilities.

The Stantec report recommends a minimum bicycle parking rate that is greater than existing demand to support ongoing and future shifts towards more sustainable transport mode targets.

Research has found that an increase in quality end-of-trip facilities is correlated with increased bicycle use. The provision of showers, personal lockers and change rooms also has the benefit of accommodating other people who walk or exercise regularly.

All new developments and wherever practicable, bicycle parking and end-of-trip facilities should be provided for alterations and additions and change of uses.

The bicycle parking and end-of-trip facilities are minimum requirements. As a minimum, all developments should provide 2 bicycle parking spaces to ensure at least a small amount of parking is provided at all destinations.

Table 3 at the end of this part details the requirements for bicycle parking. Table 4 details end-of-trip facilities.

3.4 The layout, design, and security of bicycle parking facilities

The layout, design and security of bicycle parking facilities must comply with the minimum requirements under Australian Standard 2890.3 (2015). The Standard classifies bicycle parking facilities by the level of security provided. These are:

- a. Class A: a space within an individual bicycle locker that provides a high security locking system
- b. Class B: a space within a secure room or structure that is accessed with devices such as keys, codes or swipe cards for communal areas (chain mesh fencing is not suitable for Class B facilities)
- c. Class C: a space that allows a bicycle frame and wheels to be locked to a 'bicycle parking device' using the cyclists own 'locking device'

Notes:

- Class A and B bicycle parking facilities are intended for use by residents/employees of the development and must be in a secured area that is not accessible to the general public.
- Class C bicycle parking facilities are intended for use by visitors to the building and must be located in visible publicly accessible locations.
- AS2890.3 (2015) defines a 'bicycle parking device' as 'a construction made of high security material designed to provide stability to bicycles placed in or against the device'.
- Bicycle racks and rails are examples of a bicycle parking device.
- End-of-trip facilities include personal lockers for clothes, showers and change rooms.
- Where the total number of bicycle spaces and end-of-trip facilities is not a whole number, the number of spaces and facilities required must be rounded up.

4 Car parking and driveway design

4.1 Car parking

These controls apply to all car parking and access arrangements:

- a. the layout of car parking spaces must comply with AS/NZS 2890.1 and AS/NZS 2890.6
- b. column locations must comply with AS/NZS 2890.1 (columns shall not be located within circulation aisles)
- c. the headroom for an accessible (disabled) car space must comply with the requirements of AS 2890.6
- d. car parking space accessed from a rear lane must provide a minimum setback of 1m with a 1m splay to the rear boundary
- e. except for assigned residential parking spaces, the length of any blind aisle shall not exceed the width of six 90° parking spaces plus 1m

- f. one way aisles/access handles may only be used for areas where there is no general public access, there are less than 6 parking spaces and where appropriate measures are provided to allow vehicles to pass within the site
- g. ventilation must be provided under the relevant standards for basement car parking areas
- h. for developments with vehicular access from a main road frontage (Pacific Highway, Eastern Valley Way, Strathallan Avenue, Willoughby Road, Penshurst Street and Boundary Street) vehicles must be able to turn around within the site to ensure they can enter and leave the site in a forward direction

4.2 Vehicle crossing/driveways

A new vehicle crossing is required if the proposal involves a change to the vehicle access arrangements or the number or location of car parking spaces and the existing vehicle crossing has any of these features:

- a. is in a dilapidated condition with multiple cracks
- b. is a trip hazard to pedestrians along the footpath alignment
- c. there is evidence of significant damage from scraping on the road/laneway
- d. is incomplete or has been constructed with non-approved materials
- e. the crossing is unsafe due to its alignment with the proposed driveway or car parking space(s)
- f. is in an unsafe location and there is a better alternative location for a new driveway
- g. is proposed to be replaced as part of the development application

This requirement for a new crossing does not apply to proposed structures such as pergolas or open carports over an existing hard stand area.

Before construction, the applicant must obtain a separate vehicle crossing permit (construction of crossover on council property) from Willoughby City Council.

A new driveway crossing must comply with these controls:

- h. the location, siting and grades of driveways, and driveway width must be in line with Australian Standard AS/NZS 2890.1
- i. crossings must be separated from each other at the kerb and must be a minimum of 600mm from the side boundary for residential properties and 1.2m for other developments
- j. the distance between adjacent crossings must be less than 1.5m or greater than 6m to deter vehicles from attempting to park between driveways
- k. driveways must not be located closer than:
 - 2m from a street tree or 1.5m from any other tree or as otherwise directed by Willoughby City Council
 - 1m from a power pole
 - 1m from a council stormwater pit
- l. if there is parking onsite for more than 6 vehicles, the driveway width must be sufficient to allow two vehicles to pass within the site

- m. sight distance requirements at the property boundary must be provided in line with AS/NZS 2890.1
- n. for single dwellings, only one crossing is permitted per property to improve streetscape, maximise on-street parking and reduce the number of conflict points between vehicles and pedestrians
- o. dual occupancy developments may be permitted to have two vehicle crossings, providing the overall width of the two crossings does not exceed 30% of the property frontage
- p. to maximise pedestrian safety, vehicles are to be at 90° to the boundary when leaving the site (where parking spaces are not in-line with the vehicle crossing, swept path diagrams are to show this requirement)

Note:

- Willoughby City Council does not generally support the removal of street trees to construct a new crossing. Approval to remove a tree will only be granted in exceptional circumstances.

4.3 Access handle

For any access handle for battle-axe allotments serving two or more dwellings, these requirements apply:

- a. the minimum width of the access handle is 4.8m
- b. reciprocal rights of way are to be provided over each separate access strip
- c. a passing bay in line with AS/NZS 2890.1 is required for access handles greater than 30m
- d. on an arterial or sub-arterial road, the access driveway for the first 6m from the property boundary is to be 5.5m wide

4.4 Mechanical car parking systems and turntables

Willoughby City Council does not generally support mechanical car parking systems or turntables, and under no circumstances will they be allowed for accessible or visitor car parking.

An applicant must show there is no other reasonable car parking arrangement available. They must ensure that safety, emergency and noise issues relating to the ongoing operation of a mechanical car parking system and/or turntable have been addressed to Willoughby City Council's satisfaction.

Mechanical systems and turntables must satisfy all of these requirements:

- a. the site is constrained by existing conditions
- b. they are only used to access spaces assigned to a particular dwelling/unit/tenant/business
- c. there is adequate standing space within the site for vehicles waiting to use the system
- d. turntables may be used to ease turn paths but must not be the sole means to allow vehicles to turn around within the site; vehicles must be able to turn around using multi-point turns without using the turntable

Note:

- The purpose of item (d) is to ensure vehicles can enter and leave the site if there is a malfunction with the turntable.

4.5 Electric vehicles

More households are transitioning to owning electric vehicles. All new dwellings and new dual occupancies, and significant alterations and additions to existing dwellings and dual occupancies are required to make provision for the installation of Level 2 electric vehicle (EV) charging stations.

As a minimum, new dwelling, new dual occupancies, and any significant alterations to existing dwellings or dual occupancies must make provision for at least a 40A (single phase) dedicated circuit to each garage.

Notes:

- Alterations and additions to an existing dwelling is regarded as 'significant' if the proposal has an estimated cost in excess of \$100,000.
- The following are excluded from this control:
 - works not requiring a licenced electrician
 - works external to the principle dwelling (e.g. pools, secondary dwellings, boatsheds, and outbuildings)
- Notwithstanding the above, provision for EV charging stations needs to be provided in garages and car ports, even if they are external to the principle dwelling.
- Provision for EV charging must be made for all new major residential and non- residential developments (see section 5.6 in this Part for guidelines on EV charging).

5 Major development

In this part of Willoughby DCP, the definition of 'major' developments include:

- a. new residential developments for attached dwellings, multi dwelling housing, residential flat buildings, seniors housing, boarding houses and hostels exceeding 300m² and 12 persons, shop top housing and mixed use developments
- b. the erection of new buildings exceeding 1,000m², including commercial, industrial, institutional and other non-residential buildings
- c. substantial redevelopment, refurbishment, or conversion of an existing building

Notes:

- Redevelopment is generally seen as 'substantial' if the proposal will result in more than a 10% increase in the 'gross floor area'.
- Depending on the size and scale, and any likely impacts, an authorised officer may determine that a proposal is regarded as 'major' development.
- Institutional and non-residential buildings include health service facilities, recreation facilities, centre-based child care facilities, community facilities, a place of public worship, and other miscellaneous developments.

5.1 Parking and traffic studies

All new major developments and developments that involve substantial alterations and additions must include a parking and traffic impact assessment report with the development application. This report may also be required for a change of use that is likely to have adverse traffic and/or on-street parking impacts.

The report must assess the parking and traffic impacts of the development on the surrounding arterial and local road network. It must also identify any external traffic-related infrastructure requirements for the proposed development.

Note:

- Any traffic or parking counts done for a parking and traffic impact assessment report should not be done during public or school holiday periods.

5.2 Off-street loading/unloading facilities

All new major commercial, retail and industrial developments, and developments that involve substantial redevelopment with a floor area in excess of 500m² for commercial/retail developments and 1,000m² for industrial developments, must make adequate provision for off-street loading and unloading facilities.

A loading/unloading bay/dock for these types of developments must comply with these controls:

- a. loading bay dimensions must conform with AS 2890.2
- b. onsite turning areas must be provided to ensure service and delivery vehicles can enter and leave the site in a forward direction (the swept path design templates shown in AS 2890.2 must be used to determine the layout of service areas)
- c. the minimum headroom must be in line with AS 2890.2
- d. adequate provision must be made for garbage compactor units
- e. internal waste collection areas must have a headroom clearance of at least 6.6m
- f. splays must be provided to the loading bay areas and at the driveway to ensure adequate sight distances for pedestrians

For other existing or smaller commercial, retail and industrial developments, including change of use, the size and number of loading bays/docks will depend on the type, size and scale of the proposed development. This includes the frequency of deliveries, size and bulk of goods, size of trucks, availability of on-street loading zones; and intended use of the commercial, retail or industrial premises.

As a minimum, provision should be made for a small rigid vehicle to access the site.

Note:

- The statement of environmental effects (SEE) or the parking and traffic impact assessment report must include details of the anticipated volume and frequency of deliveries, and the size of vehicles necessary to service the proposed development.

5.3 Visitor car parking

The visitor car parking rates in Chatswood CBD, St Leonards precinct and the Artarmon railway precinct are maximum rates. Visitor car parking spaces outside these areas, including major public transport routes, are target rates.

All visitor car parking spaces must be grouped together, sign posted and provided in a convenient and readily accessible location.

5.4 Accessible car parking for people with disability

All new developments and significant alterations and additions to major developments must, as a minimum, provide accessible car parking spaces for people with disability in line with Section D3.5 of the AS2890.6 Building Code of Australia under the National Construction Code.

For Class 2 buildings that contain two or more sole occupancy units, the required number of accessible spaces is calculated on the number of adaptable units required for that development. See Part B, Section 4.3.3 of Willoughby DCP to determine the number of adaptable units required for medium and high-density housing.

The National Construction Code identifies the class of building for different types of development. A guide to the building classifications is in Attachment 4.

Table 5 at the end of this part details the required number of accessible car parking spaces.

Accessible spaces must be clearly marked and provided in a communal car parking area. These spaces are not to be allocated to any individual unit or tenant.

There must be a continuous accessible path of travel from all accessible parking spaces to the entrance of the premises. In basement car parking areas, lifts must provide access to all levels.

Notes:

- Accessible car parking spaces must comply with the design requirements of AS/NZS 2890.6.
- Where the total number of accessible spaces is not a whole number, the number of spaces required is to be rounded up.
- The required number of accessible car spaces for unspecified developments will be assessed on the individual merits of the proposal, with regard to the nature and scale of the proposed development.
- Where practicable, accessible car parking spaces should be provided for all developments, including a change of use.

5.5 Stack car parking

Stack or tandem car parking is where one or more vehicles need to be moved to allow another vehicle to enter or exit a car space. This type of car parking is only permitted if the affected vehicles are allocated to the same owner or tenant of residential, commercial, retail or industrial premises. It is also only permitted if there are no safety issues and not more than 25% of vehicles are in a stacked parking arrangement.

Notes:

- Stack or tandem car parking will generally only be considered for employee vehicles associated with low turnover commercial, retail and industrial uses having less than a total of 12 car parking spaces.
- Stack or tandem car parking is not permitted for accessible or visitor car parking.
- Adequate area to manoeuvre vehicles in a stacked parking arrangement must be available on site for all major residential, commercial, retail and industrial developments.

5.6 Electric vehicle charging

Demand for public electric vehicle (EV) charging stations is set to increase. Willoughby City Council is committed to extending this infrastructure as suitable locations are identified. It is also necessary to make provision for electric vehicle charging on private properties. All types of new major residential and non-residential developments must be designed and constructed with appropriate electrical infrastructure to allow for future EV charging points.

1. The following controls apply to new residential flat buildings, multi dwelling housing, shop top housing and mixed use developments:
 - a. All garages and car spaces allocated to an individual residential apartment must make provision for:
 - Level 2: single or 3-phase electric vehicle supply equipment with a power range of 7kW-22kW, as defined by NSW Electric and Hybrid Vehicle Plan (Future Transport 2056) from Transport for NSW, which provides faster, more secure charging.
 - b. All communal car parking areas within a new major residential development must make provision for:
 - A minimum 5A per phase electrical capacity must be provided per space e.g.:
 - If there are 4-9 spaces per level, provide one dedicated 63A three-phase EV charging switchboard per level.
 - If there are 10-19 spaces per level, provide one dedicated 100A three-phase EV charging switchboard per level.
 - If there are 20-39 spaces per level, provide one dedicated 200A three-phase EV charging switchboard per level.
 - If there are 40-80 spaces per level, provide one dedicated 400A three-phase EV charging switchboard per level.

In addition:

- Switchboards shall be dedicated and centrally located to facilitate simple connection of EV charging.
 - Common areas should provide Level 2 cabling to each space, or where this is not possible, at least the provision of cable trays sufficient to accommodate electric circuitry between each car space and the dedicated EV charging switchboard.
2. The following controls apply to all new commercial, industrial and other major developments

- a. All communal car parking areas for new commercial, industrial and all other major developments must make provision for:
 - A minimum 5A per phase electrical capacity must be provided per space e.g.:
 - If there are 4-9 spaces per level, provide one dedicated 63A three-phase EV charging switchboard per level.
 - If there are 10-19 spaces per level, provide one dedicated 100A three-phase EV charging switchboard per level.
 - If there are 20-39 spaces per level, provide one dedicated 200A three-phase EV charging switchboard per level.
 - If there are 40-80 spaces per level, provide one dedicated 400A three-phase EV charging switchboard per level

Notes:

- Switchboards shall be dedicated and centrally located to facilitate simple connection of EV charging.
- Individual industrial units, commercial/retail premises and other non-specified major developments are encouraged to provide EV charging points to facilitate the growing demand for electric vehicles.
- 'Other' major developments include, but not limited to: boarding houses; child care centres; gymnasiums; specialised retail premises (bulky goods stores), etc.
- EV charging may be required for 'significant' alterations and additions to major non-residential developments. Alterations and additions are generally regarded as 'significant' if the proposal will result in more than a 10% increase in the 'gross floor area'. The requirement for the provision of EV charging will have regard to the nature and extent of the proposal, and practicality of retrofitting the electrical capacity for the building.

5.7 Car share spaces

There is a growing trend for individuals and businesses to use private car share vehicles as an economical alternative to car ownership. Car share schemes are generally more viable in locations where private car ownership is discouraged, such as Chatswood CBD, St Leonards precinct and the Artarmon railway precinct.

A reduction in car parking may be justified if car share spaces are provided and a legally binding car share scheme is put in place in lieu of the nominated car parking rates.

The Provision of car share spaces must satisfy the following controls:

- a. one car share space may be substituted for 10 car parking spaces, whether they are maximum or 'target' rates in accordance with Table 1 (Parking Requirements)
- b. car share spaces must be nominated on the plans submitted with the development application
- c. all car share spaces are to be:
 - publicly accessible 24 hours a day, seven days a week
 - located together in a communal area with safe pedestrian access
 - located in an accessible area with access from a public road
 - located in a mobile phone signal area to ensure connectivity to the car share scheme

- located adjacent to appropriate electrical infrastructure to allow for EV charging points
 - integrated with the streetscape and suitably screened with appropriate landscaping where the space is external
 - clearly designated as a car share space by signage and line marked
- d. on-site car share spaces are to be retained as common property by the owner or the Owners Corporation of the site and not sold or leased to an individual owner, occupier or any external entity at any time
- e. submission of documentary evidence that the owner or Owners Corporation has entered into a legally binding agreement for a car share scheme with a suitable car share operator (details to be submitted to Council prior to the issue of an Occupation Certificate)
- f. the use and operation of the car share spaces must be managed by the owner or the Owners Corporation or contracted to a care share operator (details to be submitted to Council prior to the issue of an Occupation Certificate)
- g. the car share spaces must be included in the land title to allow public access via covenants, building or strata management statements, by-laws or any other necessary instrument (details to be submitted to Council prior to the issue of an Occupation Certificate)
- h. the owner or Owners Corporation must have appropriate insurance, including public liability (details to be submitted to Council prior to the issue of an Occupation Certificate)

Note:

- **Car share scheme** means a scheme in which a body corporate, an unincorporated body or a public authority owns or manages and maintains vehicles for shared or communal use and hires those vehicles exclusively to members of the scheme for occasional use for short periods of time, on demand and on a pay-as-you go basis.
- Car share spaces are to be rounded down to a whole number if it is not a whole number.
- On-street parking permits will not be available for owners or occupiers of any new developments that are subject to the car parking provisions under Part F (Transport and Parking Management) of the WDCP.

5.8 Autonomous vehicles

The use of autonomous vehicles may be a reality in the foreseeable future. Production and active testing is underway in major cities around the world to ensure the safe and efficient operation of these vehicles. This means appropriate infrastructure to support the use of autonomous vehicles needs to be in place for new developments.

All car parking areas must provide clear line marking around the base of columns, kerbs and driveway paths. There must be clearly defined (white or yellow) definition to columns and poles to improve visibility to autonomous vehicles.

Note:

As technology evolves, further requirements may be required to support the safe and efficient operation of autonomous vehicles.

5.9 Further controls for medium and high-density residential accommodation

These further controls apply to attached dwellings, multi dwelling housing, residential flat buildings, seniors housing, boarding houses and hostels exceeding 300m² and 12 persons, shop top housing, and mixed use developments comprising residential units:

- a. visitor parking must be suitably grouped, clearly marked and conveniently located
- b. visitor parking is to be designed to comply with Class 2 Medium Term parking in line with AS/NZS2890.1
- c. any security for residents' vehicles must be installed to ensure that it does not impede access to visitor spaces
- d. visitor car parking may be located forward of the building line providing it does not detrimentally impact the streetscape
- e. all above ground car parking areas must be well landscaped and include the use of absorptive surfaces such as pavers or 'grasscrete' to soften the appearance of these areas
- f. resident visitor car parking spaces must be available at all times for shop top housing and mixed use developments
- g. the provision of car wash bays is not encouraged; if a car wash bay is proposed, the space must be connected to the sewer and serviced by recycled or tank stored water, and the development application must include the hydraulic details
- h. provision must be made for removalist vans to park, load and unload onsite for all developments of more than 12 units or where no kerbside parking is available in front of the site on a classified road
- i. pedestrian access to dwellings should be separate from vehicular access to the site
- j. for residential accommodation of between 6 and 18 units, bulk waste storage bins must be provided on the site and adequate provision must be made for garbage vehicles to enter and leave the site in a forward direction
- k. for residential accommodation of 4 or more storeys or 18 or more units with basement car parking, bulk waste storage bins must be provided in the basement with adequate height and provision for garbage vehicles to enter and leave the site in a forward direction

5.10 Additional controls for a centre-based child care facility

A centre-based child care facility includes a building or place that provides long day care, occasional child care, out of hours school care, preschool or an approved family day care venue.

These further additional controls apply to all types of child care centres:

- a. access driveways widths are to be in line with AS/NZS 2890.1
- b. car parking is to be provided on site for setting down and picking up children
- c. vehicles must enter and leave the site in a forward direction

- d. vehicle parking must be separated from any outdoor play areas to ensure safety and vehicle emissions do not affect children
- e. pedestrian access must be separated from the access and manoeuvring of vehicles in the driveway and car parking areas

These controls apply to pre-school and long day care centres in residential areas outside Chatswood CBD:

- f. a minimum 20m frontage is required or a corner block location in all residential areas to allow for a one-way drive through entry and exist
- g. a drive-through drop-off and pick-up area is required at the rate of 1 car space per 10 children within the driveway
- h. the width of the driveway must allow for a vehicle exiting the site to pass a parked vehicle

These controls apply to child care centres in Chatswood CBD

- i. staff parking is to be clearly marked to reflect that they are for the exclusive use of staff associated with the operation of the child care centre between 7am and 7pm
- j. a vehicle drop-off/pick-up area is to be provided at the rate of 1 space per 8 children
- k. if the drop-off/pick-up area is in a basement car park area, it must be within 20 metres of a lift providing direct access to the child care centre
- l. if the drop-off/pick-up area is not provided onsite, the matter will be referred to Willoughby City Council's traffic committee to consider
- m. the drop-off/pick-up area should be clearly marked to reflect that it is for the exclusive use of the childcare users during the centre's morning and afternoon peak times, generally from 7am to 9.30am and 4pm to 6.30pm

Note:

- Depending on the size, scale, and location of the child care centre in a commercial area outside of Chatswood CBD, the number of car spaces and any other controls will be considered on the individual merits of the proposed development.

6 Alternative and sustainable transport strategies

Willoughby City Council encourages alternative and sustainable transport strategies to reduce the use and reliance on motor vehicles as the principal mode of transport.

Alternative transport strategies can be achieved by including a 'travel demand management plan' (also known as a 'green travel plan') in the business operation.

This plan has details on how to modify travel decisions to and from a business premises so that more desirable modes of transport are used and to reduce the adverse impacts of car travel. Examples include use of bicycles, carpooling, mini-bus pick-up/drop off, public transport services and provision of car share spaces.

Strategies in a travel demand management plan may include:

- a. provide information to staff on public transport options available
- b. provide staff with a discount or subsidy on public transport costs

- c. provide a bus to pick up and drop off staff to the nearest railway station or bus interchange
- d. provide staff with cycling allowances, loans and/or insurance
- e. provide secure bicycle storage and shower and change room facilities
- f. introduce a staff car sharing scheme for fleet vehicles
- g. use private transport services or public transport for work related journeys
- h. create a carpool scheme to and from work and provide priority parking for staff who carpool with 2 or more passengers

Subject to a written agreement and conditions of consent to implement a travel demand management plan, Willoughby City Council may reduce the required number of car parking spaces for a development.

7 Laneway widening

Increased urban development often requires the local road network to be upgraded to cope with additional traffic and improve access and traffic circulation. Willoughby City Council has identified a number of laneways that need to be widened to accommodate future commercial and residential developments. Affected properties must dedicate a portion of land when redevelopment occurs.

The affected properties are identified in Attachment 5.

Notes:

- Redevelopment of many properties has already resulted in the dedication of land for future lane widening purposes.
- Additional road works may be required to mitigate associated traffic impacts arising from a proposed development.
- The 'gross floor area' or 'floor space ratio' is calculated on the existing site area (before any dedication of land).

Table 1 Car parking rates

Land use category	Development type	Chatswood CBD and St Leonards precinct (maximum rates)	Artarmon railway precinct (maximum rates)	Chatswood CBD and St Leonards precinct (minimum rates)	Artarmon railway precinct (minimum rates)	All other areas, including major public transport route (target rates)
Residential	a. dwelling houses, attached, and detached dual occupancies	1 space/dwelling	1 space/dwelling	<ul style="list-style-type: none"> • 0.1 spaces per studio/ 1-bedroom flat • 0.2 spaces per studio/ 2-bedroom flat • 0.25 spaces per studio/ 3+ bedroom flat 	<ul style="list-style-type: none"> • 0.1 spaces per studio/ 1-bedroom flat • 0.2 spaces per studio/ 2-bedroom flat • 0.25 spaces per studio/ 3+ bedroom flat 	1 space/dwelling with 2 bedrooms or less; 2 spaces/dwelling with 3 bedrooms or more

Willoughby Development Control Plan Part F: Transport and Parking Management 2023

Land use category	Development type	Chatswood CBD and St Leonards precinct (maximum rates)	Artarmon railway precinct (maximum rates)	Chatswood CBD and St Leonards precinct (minimum rates)	Artarmon railway precinct (minimum rates)	All other areas, including major public transport route (target rates)
Industrial	aa. warehouse, distribution centres, and wholesale supplies (in an industrial zone)	1/300m ² of internal and external storage areas plus 1 space per 60m ² of office space	1/300m ² of internal and external storage areas plus 1 space per 60m ² of office space	N/A	N/A	1/300m ² of internal and external storage areas plus 1 space per 60m ² of office space
Sex services premises	bb. Sex services premises	2 spaces per room	2 spaces per room	1 space per room	1 space per room	2 spaces per room

Notes:

1. If a specific land use is not included in this table, the car parking requirements will be assessed on the merits of the application. A parking and traffic impact assessment report may be needed with the application to determine the number of car spaces required.
2. Where the amount of parking required is not a whole number, the number of spaces required will be rounded down to the nearest whole number.

Table 2 Motorcycle parking rates

Zone type and usage	Chatswood CBD, St Leonards precinct and Artarmon railway precinct	All other areas, including major public transport routes
Business zones	1 space per 20 car parking spaces; 1 visitor space per 10 motorcycle spaces	1 space per 30 car parking spaces; 1 visitor space per 15 motorcycle spaces
Industrial zones	1 space per 20 car parking spaces; 1 visitor space per 10 motorcycle spaces	1 space per 30 car parking spaces; 1 visitor space per 15 motorcycle spaces
Residential zones and the residential components of shop top and mixed-use developments	1 space per 20 car parking spaces; 1 visitor space per 10 motorcycle spaces	1 space per 20 car parking spaces; 1 visitor space per 10 motorcycle spaces

Notes:

- Motorcycle parking rates for land uses not included in this table will be assessed on the merits of the application
- As a minimum, one space for residents and one visitor space is required for residential development comprising 10 or more dwellings
- As a minimum, one space for employees and one visitor space is required for commercial, retail, industrial and other non-residential buildings exceeding 500m²
- Visitor spaces are included in the total number of spaces required

Table 3 Requirements for bicycle parking and end-of-trip facilities

Zone type and usage	Chatswood CBD, St Leonards precinct and the Artarmon railway precinct	All other areas, including major public transport routes
Business	1 Class A or B bicycle space per 10 car parking spaces Minimum 1 Class C bicycle space or 1 space per 10 Class A or B bicycle spaces, whichever is the greater	1 Class A or B bicycle space per 20 car parking spaces Minimum 1 Class C bicycle space or 1 space per 20 Class A or B bicycle spaces, whichever is the greater
Industrial	Minimum 1 Class A or B bicycle space or 1 space per 10 car parking spaces, whichever is the greater Minimum 1 Class C bicycle space or 1 space per 10 Class A or B bicycle spaces, whichever is the greater	Minimum 1 Class A or B bicycle space or 1 space per 20 car parking spaces, whichever is the greater Minimum 1 Class C bicycle space or 1 space per 20 Class A or B bicycle spaces, whichever is the greater
Residential and residential components of shop top and mixed-use developments	1 Class A or B parking spaces per 10 units 1 Class C (rails/racks) per 10 apartments for visitors	1 Class A or B parking spaces per 20 units 1 Class C (rails/racks) per 20 apartments for visitors

Table 4: End-of-trip facilities for non-residential developments

Showers	Change rooms	Lockers
One shower per 5 bicycle parking spaces (Class A or B)	One change room per shower	Two personal lockers per bicycle space

Notes for Tables 3 and 4:

- All bicycle parking and end-of-trip facilities for land uses not included in these tables will be assessed on the merits of the application.
- If no car parking or reduced car parking is provided in the Chatswood CBD, St Leonards precinct or the Artarmon railway precinct, bicycle parking and end-of-trip facilities must be provided and calculated on the maximum number of car parking spaces that would otherwise be required.

- Where more than one shower or change room is required for end-of-trip facilities, separate male and female facilities must be provided.

Table 5 Accessible car parking requirements

Class of building	Number of accessible spaces
Class 1a	Nil
Class 1b	1 space for each accessible or adaptable unit
Class 2	Whichever is the greater: <ul style="list-style-type: none"> a. Minimum 1 resident and 1 visitor space for developments comprising 10 or more units b. 1 space/4 accessible or adaptable units + 1 visitor space for developments comprising 50 or more car parking spaces
Class 3	Whichever is the greater: <ul style="list-style-type: none"> a. Minimum 1 resident and 1 visitor space for developments exceeding 300m² and 12 persons b. 1 space for each accessible or adaptable unit (10% of spaces must be provided as a visitor space) c. 3% of the total car parking spaces (10% of spaces must be provided as a visitor space)
Class 4	1 accessible space
Class 5, 6, and 8	In parking areas with 5 or more spaces, whichever is the greater: <ul style="list-style-type: none"> a. 1 employee and 1 visitor space b. 3% of the total car parking spaces (10% of spaces must be provided as a visitor space)
Class 7 and 9b	In parking areas with 5 or more spaces, whichever is the greater: <ul style="list-style-type: none"> a. 1 space b. 3% of the total car parking spaces
Class 9a	Whichever is the greater: <ul style="list-style-type: none"> a. 1 employee and 1 visitor space b. 4% of the total car parking spaces (10% of spaces must be provided as a visitor space)

Notes:

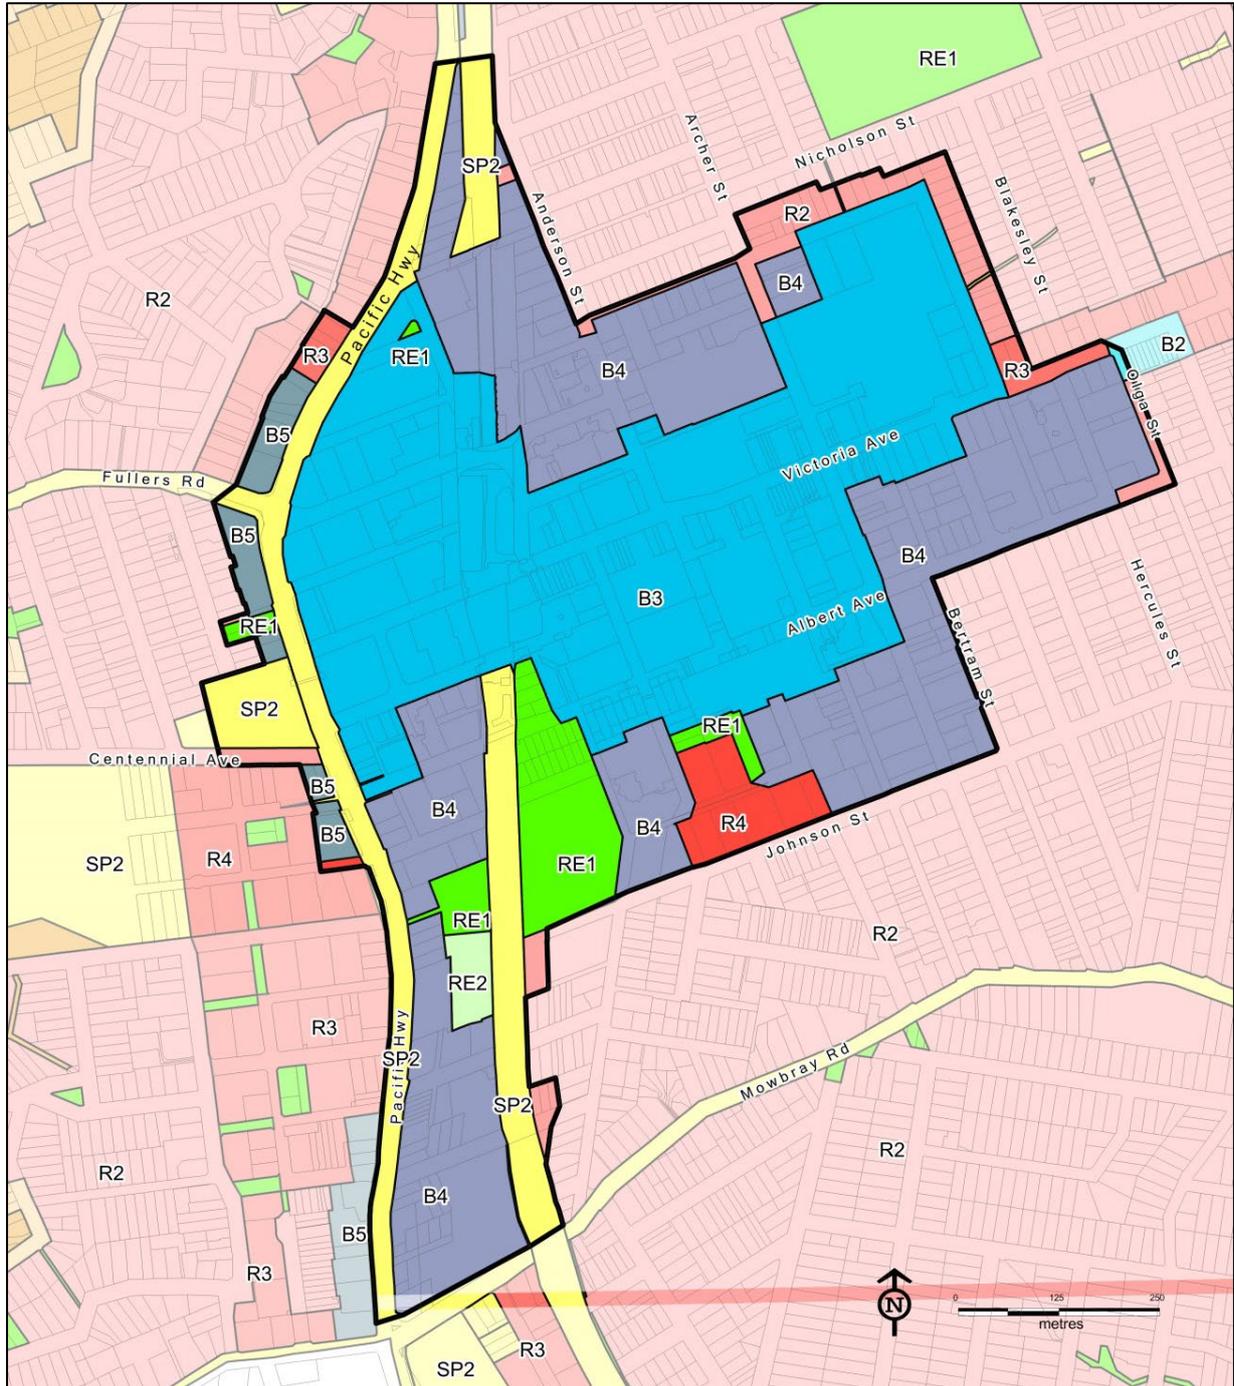

- Accessible parking is included in the total number of car parking spaces required. However, if no parking is required, the minimum number of employee/resident and visitor spaces must be provided.
- Additional accessible car parking spaces may be required in line with Section D3.5 of the Building Code of Australia under the National Construction Code.
- If the requirements under Section D3.5 change, the accessible car parking controls under this part of Willoughby DCP change accordingly.

Willoughby Development Control Plan Part F: Transport and Parking Management 2023

- Applicants may apply a 'performance solution' under the Building Code of Australia to satisfy the provision of accessible car parking in lieu of the 'deemed-to-satisfy solution' requirements.

Map 2 St Leonards precinct

Attachment 3: Artarmon railway precinct

Map 3 Artarmon railway precinct

Attachment 4: Building Code of Australia building classifications

This table identifies the class of building and the different types of development:

Table 6 Building Code of Australia building classifications

Class of building	Types of development
Class 1a	Single dwellings. This includes a detached house or semi-detached dwellings, semi-detached dual occupancies, terraces, townhouses and villa units with fire resisting walls and no basement carpark.
Class 1b	Boarding house, guest house, hostel, or the like, not exceeding 300m ² and not more than 12 residents.
Class 2	Building containing two or more sole occupancy units. This includes dual occupancies/duplexes (where one unit is above the other), serviced apartments with a kitchen, apartments in shop-top housing, and residential flat buildings.
Class 3	A residential building, other than a Class 1 or 2 building, including; boarding house, hostel, backpackers accommodation, and retirement villages.
Class 4	A single dwelling within a class 5, 6, 7, 8 or 9 building.
Class 5	An office building used for professional or commercial purposes, excluding Class 6, 7, 8 or 9 buildings.
Class 6	Shops and buildings used for supply of services directly to the public, including; café, restaurant, hairdresser's shop, public laundry, showroom, and service station.
Class 7a	A carpark.
Class 7b	Warehouses, storage/display of goods for sale by wholesale.
Class 8	A laboratory or building (factory) for the production, assembly, altering, repairing, packing, finishing or cleaning of goods for trade, sale or gain.
Class 9a	Healthcare building.
Class 9b	Assembly building including halls, libraries, schools, early childhood centres, church, theatre, nightclub/disco, cinema, and the like.
Class 9c	Aged care building.
Class 10a	Non habitable building such as private garage, carport, shed or the like.
Class 10b	Non habitable structures such as fences, retaining walls, swimming pools, or the like.

More information is at [abcb.gov.au/Resources/Publications/Education-Training/Building-classifications](https://www.abcb.gov.au/Resources/Publications/Education-Training/Building-classifications).

Attachment 5: Laneway widenings

Table 7 Properties affected by laneway widening

Lane or road name	Properties affected	Suburb	Laneway widening required
George Brain Lane	327–341 Penshurst Street	Chatswood	1.2m from west side of west leg
George Brain Lane	72 Victoria Avenue	Chatswood	1.2m from west side of east leg
George Brain Lane	72–80 and 92–96 Victoria Avenue	Chatswood	2m from north side of southern leg
Stirling Lane	202–212, 218–224 Sydney Street; 334–348 and 352 Penshurst Street	Chatswood	2m from east side
